**Transforming care for
patients with multimorbidity**

Multimorbidity* is one of the leading causes of growing disease burden in the UK and globally

*The coexistence of multiple chronic diseases and medical conditions in the same individual (WHO)

Multimorbidity in numbers

15m

people currently
suffering in the UK

10yr

earlier appearance in
most deprived areas

30%

of individuals with 4+
conditions are under the
age of 65

50%

of GP appointments

70%

of the health and social
care spend in England

80%

prescription costs

Sustained fall in GP numbers along with continued difficulty to recruit support staff

Single disease focus and existing processes limit full utilisation of a wider generalist workforce e.g Pharmacists

Opportunistic models, poor access and variance in practice risks health inequality amongst patients

Manual laborious administrative processes further drive Practice workload pressures and financial impact

This puts further pressure on an already stretched Primary Care Workforce

**CareDoctR
brings a novel
whole systems
approach
enabled
through
creative
technology**

We integrate care for the multimorbidity patient, enabling proactive management by the Practice

We bring significant efficiencies through reducing clinical and administrative workload

We enable Practices to optimise their skill mix and tap into a wider generalist workforce

Make your patients feel cared for

Provide an integrated, person centered service for your patients with multimorbidity, resulting in enhanced patient care and improved satisfaction.

Opportunistic to proactive care

Improved patient access

Reduced correspondence and Practice attendances

Opportunity for longer consultations

No duplication of blood tests

Patient feels in more control

Automate recall workflow

Improve access

Enables use of a wider workforce

Improve care for hard to reach patients

Potential to improve QoF achievement

Support CQC compliance

Gain practice efficiencies whilst alleviating work burden

CareDoctR can help your Practice by alleviating workload pressures and enabling better patient care. Through our highly customisable technology and novel approaches to multimorbidity care, we can provide a tailored end to end service to meet your specific needs.

Enabling Practices to work together to provide proactive, integrated care for the people and communities they serve

With Primary Care Networks coming into effect from July 2019, GPs have the opportunity to lead the evolving primary healthcare team. Through our novel approach, we will help you engage and upskill your evolving workforce to achieve economies of scale and a far more superior experience for patients.

Allows easy integration

Standardises practice across the PCN

Addresses health inequality and unmet need

Enables innovative models of care

Upskill and better utilise pharmacists

Provide proactive patient care

Our technology features

Practices benefit from auto-generation of completed care plans including pre populated pathology forms

Practices have full control over the diseases they choose to monitor including integration with existing protocols

Dashboard view clearly identifies patient responders and non responders including house bound patients

The system seamlessly identifies the patient cohort with multiple diseases and provides Practices with a holistic view of all monitoring requirements

Snapshot of monthly patient recalls allows Practices to proactively plan workforce and resources to manage demand

Upskilling a true multimorbidity workforce

In partnership with GPPT 
GP Pharmacist Training

We have partnered with GP Pharmacist Training to bring Practices targeted CPD accredited training to engage and fully utilise a wider generalist workforce.

Multimorbidity champions

We will enable you to establish a true multimorbidity clinic that allows the trained clinician to undertake more productive, one stop appointments that cover:

- Long term condition reviews
- Medication monitoring and optimisation
- QoF achievement
- Pathology test reviews

Training Features

- Three day workshop format
- Use of a case study approach to understand multiple disease states
- Understand and learn techniques used to diagnose and monitor conditions
- Gain ability to prescribe and provide a holistic approach for patient care
- Focussed attention on all aspects of the new QoF framework e.g. quality improvement domain
- SystemOne/EMIS multimorbidity template training
- Achieve competence certificates following training and online examination
- On-going online support
