

Bringing medication management into the 21st Century

Bridging the gap between health and social care

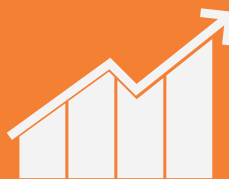

Medication management in the community sits firmly between health and social care. YOURmeds offers an easy technological solution to support medication adherence in the community.

YOURmeds is a smart medication management system that helps people take the right medication at the right time with support from their network of family and friends. Medication packs are filled and dispensed by the pharmacy network. The rechargeable YOURmeds tag shows a number on the screen when it's time to take the medication. Schedules can be personalised to fit in with an individual's lifestyle. 50 minutes before the round end time the pack sounds an alarm and informs the first supporter through the YOURmeds supporter app. The user can nominate up to 5 supporters from their network of family and friends, a new supporter is informed every 10 minutes. The YOURmeds supporter app uses the "free" social capital around a user to increase adherence and reduce the carer burden on the primary carer.

On average 84% adherence

4 x Return on Investment

1 in 4 adherent rounds due to a supporter nudge

Why is medication management important

50% of all medication prescribed is NOT taken correctly. There are many reasons why people do not take their medicines correctly, and our mission at YOURmeds is to provide the necessary support to help people improve their lives.

Supporting service users in social care is complex and often confusing. At YOURmeds we are passionate about helping people, our solution provides social services with the necessary tools to deliver value for money services

What the YOURmeds system tells you

- Medications taken at the right time
- When the wrong medication is taken
- Missed medications
- When too many medications are accessed

Engaged Pharmacy network

YOURmeds fits into the pharmacy workflow. Our technology can deliver at scale being compatible with pharmacy robots. With over 400 independent pharmacy partners we can now deliver nationally across the UK

INDEPENDENCE AT HOME

“Stoke-on-Trent Council have been using YOURmeds to support medication in the community. The data that the system provide allows us to generate evidence when it comes to commissioning care packages. YOURmeds make the process simple and easy to use and manage the onboarding process for our service users. We have seen a four times return on investment and our service users experience greater independence around taking their medication”

THINK DIGITAL 1ST

Benefits of YOURmeds

- Reduce the number of care calls commissioned. Stoke on Trent Council saw a four times return on investment and saved 2000 hours across 20 users.
- Provide real time data to inform care packages. Using data collected from the system allows councils to have a virtual window into a user's home as they can see the pack in real time.
- Reduce the burden on primary carers. Working with Parkinson's patients in Manchester, YOURmeds unique use of the wider social network around a user allows the burden of managing multiple medication rounds to be distributed across the network.
